

I am writing to comment on the broadband use of powerlines to transmit data and other forms of media. This act appears to seriously interfere with the service of amateur radio and homeland security preparedness. I am asking the decision makers to disallow the use of powerlines as a system for carrying data and other modes of media and service. It will be a serious degradation of amateur radio's ability to assist in any future emergency needs.

Sincerely, Mark Gress NØOQC
